I'm a 3rd-year **Computer Science** student at Universitas Indonesia and a polyglot developer who ships across the whole stack — **Rust systems**, **Spring Boot microservices**, **Flutter** apps, and **machine-learning** pipelines. This portfolio highlights a few projects I'm proud of.

Rust

Java / Spring Boot

Python / FastAPI

TypeScript / React

Flutter

Kotlin

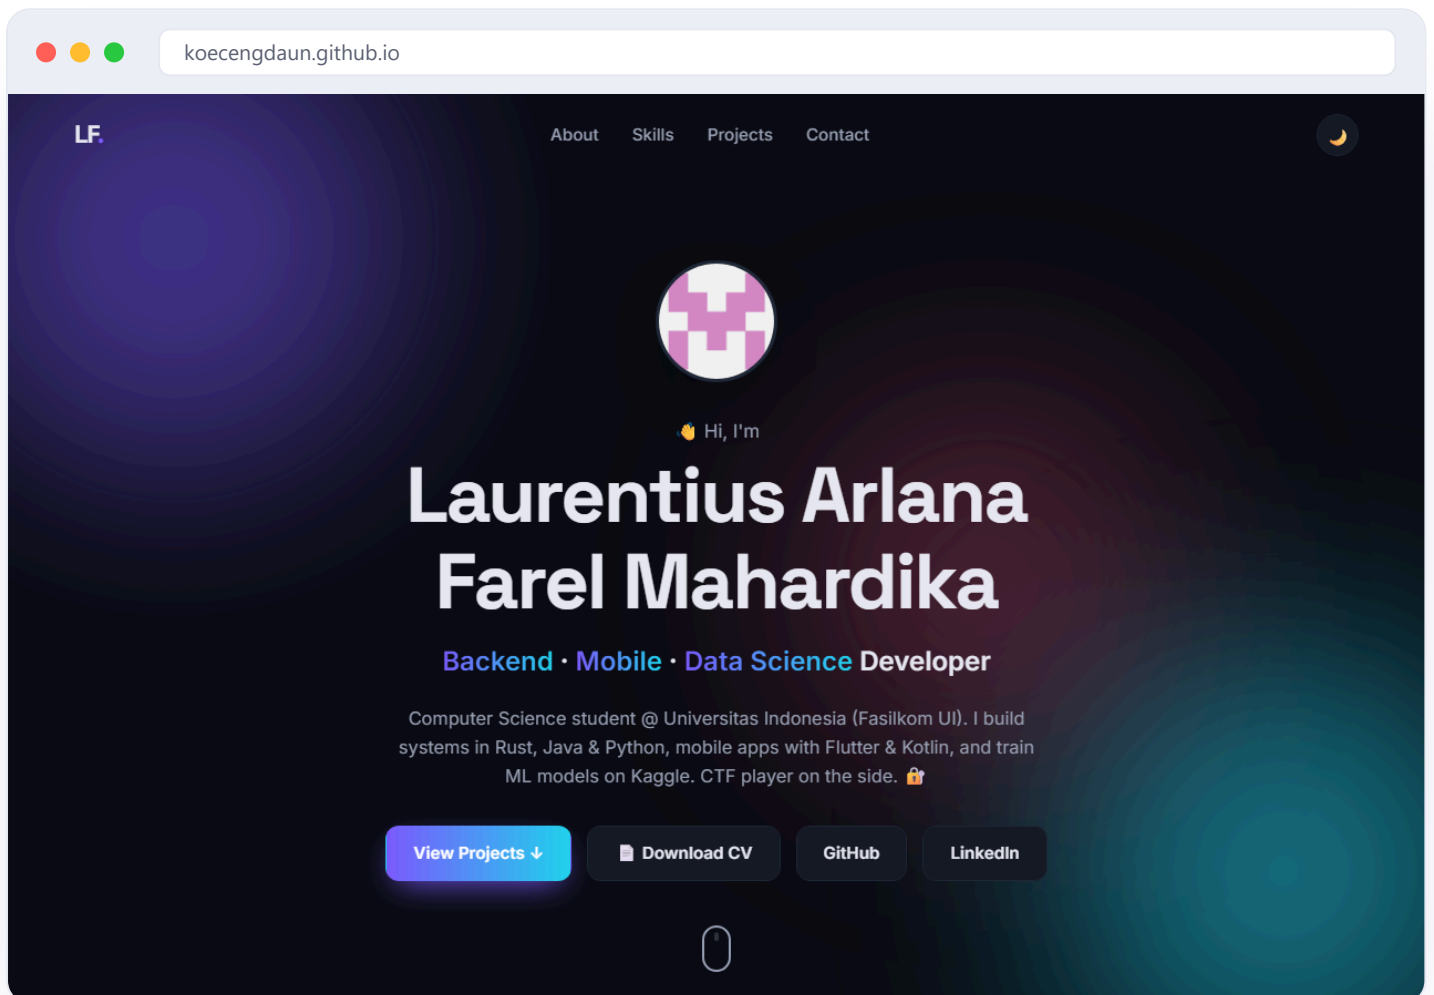

PyTorch

Transformers

Docker

PostgreSQL

AWS

Projects

Live demo · sahara.nashtagroup.co.id

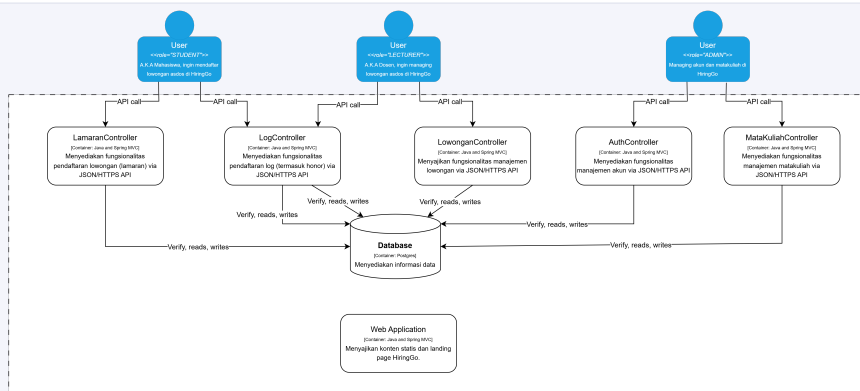

Hospital Smart Assistant (Sahara)

AI · TEAM

Python FastAPI pgvector RAG React Docker CI/CD

An **AI-powered hospital assistant** that answers questions using **Retrieval-Augmented Generation (RAG)** over a PostgreSQL + **pgvector** knowledge base. Built as a team software-engineering project with a full engineering pipeline — automated tests, static analysis (SonarQube, semgrep), and CI/CD. My focus: backend services & the retrieval layer.

HiringGo

MICROSERVICES · TEAM

Java Spring Boot JWT REST Microservices AWS

A **teaching-assistant hiring & course-management platform** built as **Spring Boot microservices** — separate services for accounts/auth, courses, vacancies, applications, and logging (see C4 container diagram above). **JWT role-based access** for Student / Lecturer / Admin, clean Controller → Service → Repository architecture, each service deployed independently.

YewChat

RUST · WASM

Rust

Yew

WebAssembly

WebSocket

A **real-time chat web app written entirely in Rust** (Yew framework) and compiled to **WebAssembly**. I added dark mode, message reactions, and multi-user presence on top of a WebSocket backend.

Data Science Showcase

ML · KAGGLE

PyTorch

Transformers

scikit-learn

OpenCV

IndoBERT

A curated collection of **machine-learning notebooks** from my Kaggle work — **CNN image-classification pipelines**, **image segmentation**, **IndoBERT** fine-tuning for Indonesian text, and reusable tabular-ML templates.

DepokRasa

DepokRasa

FULL-STACK · TEAM

Django

Flutter

PostgreSQL

REST

A **food-discovery app for the city of Depok** — a **Django** web backend with a **Flutter** mobile client — helping locals and visitors find places to eat. Team project covering auth, catalog, reviews, and a shared REST API.

Native Android · Kotlin

neko-alarm

MOBILE · SOLO

Kotlin

Android

Jetpack

A **native Android alarm app** I built in Kotlin to fix my own messy sleep schedule — a small solo project to get hands-on with the Android SDK and lifecycle.
